University Control System

Dear partners and restaurant staff, this Letter of Intent is to express our interest in participating in the remodeling of the system to consume food in the restaurant due to the health emergency, for which we present our draft work plan:

1.- Design of a new logo that shows the dynamics of a menu where you can add your user, choose products and the time you will be in the restaurant, while making it attractive and unmistakable for students.

2.- Planning in the order of the student / user decides to consume, returning as a result the total price of products, date and time in which they bought.

3.- Storage of invoices within a file to facilitate their information and organization.

4.- Client entry through data such as name, ID, and email.

We consider that this system is what is required for the bar of the University of the Armed Forces ESPE since it is even capable of being perfected. It is aligned with the requirements of the students and the covid-19 as a current problem.

I sincerely bid you farewell:

Cristian Maranje
Software Runners's Manager
